AMPLIFIERS

Circuit transformation method from OTA-C circuits into CFA-based RC circuits p209
Class-AB SiC CMOS power opamp with stable voltage gain over wide temperature range p22
Novel CMOS differential voltage current conveyor and its applications p195
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach p104
Theory and performance of parabolic true logarithmic amplifier p223
Thermal design of gallium arsenide MESFETs for microwave power amplifiers p45

ANALOGUE ELECTRONICS

3.3 V mixed-mode IC design using switched-current techniques for speech applications p367
Assessing and comparing fault coverage when testing analogue circuits p1
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters p318
Collective process circuit that sorts p145
Current conveyor based test structures for mixed-signal circuits p213
Current-mode defuzzifier circuit to realise the centroid strategy p265
Testability aspects of folded source-coupled logic p361
Versatile architecture for current-mode biquadratic filters in CMOS technology p229

AUTOMATIC TEST SYSTEMS

Assessing and comparing fault coverage when testing analogue circuits p1
Simulator for path-delay faults on mixed-level circuits p236

CALIBRATION

Improved error-table compensation of A/D converters p343
Systolic implementation of higher-order CMAC and its application in colour calibration p129

CIRCUIT CAD

Analysis and design of a fixed-frequency LCL-type series-resonant converter with capacitive output filter p97
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis p355
High performance hardware accelerator for design-error simulation p81
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach p104

CIRCUIT THEORY AND DESIGN

Analysis and design of a fixed-frequency LCL-type series-resonant converter with capacitive output filter p97
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters p318
Current conveyor based test structures for mixed-signal circuits p213
Delay time sensitivity analysis of multi-generation BiCMOS digital circuits p60
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis p355
Diagnosis of multifaults in analogue circuits using multilayer perceptrons p149
Finding all DC solutions of nonlinear resistive circuits by exploring both polyhedral and rectangular circuits p17
High performance hardware accelerator for design-error simulation p81
IC compatible planar inductors on silicon p29
Improved PIN diode circuit model with automatic parameter extraction technique p329
Knowledge based automatic simulation model generation system p88
New results on the resistance of an n-cube p51
Parallel logic simulation with assignable delays on a vector multiprocessor computer p5
Parallel sparse-matrix solution for direct circuit simulation on a transputer array p335
Performance-driven macro-block placer for architectural evaluation of ASIC designs p190
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach p104

CMOS INTEGRATED CIRCUITS

3.3 V mixed-mode IC design using switched-current techniques for speech applications p367
Class-AB SiC CMOS power opamp with stable voltage gain over wide temperature range p22
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters p318
CMOS switched current phase-locked loop p75
Current conveyor based test structures for mixed-signal circuits p213
Current-mode defuzzifier circuit to realise the centroid strategy p265
Design considerations and implementation of very low frequency continuous-time CMOS monolithic filters p68
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis p355
High-density 16/8/4-bit configurable multiplier p272
New static multi-output carry lookahead CMOS adders p350
Novel CMOS differential voltage current conveyor and its applications p195
Systolic implementation of higher-order CMAC and its application in colour calibration p129
Testability aspects of folded source-coupled logic p361
Versatile architecture for current-mode biquadratic filters in CMOS technology p229
Wired-OR property and improved structure of recovered energy logic (REL) p378

CODES AND DECODING

On-chip memory module designs for video-signal processing p138

COMPUTATIONAL COMPLEXITY

High performance hardware accelerator for design-error simulation p81
Parallel logic simulation with assignable delays on a vector multiprocessor computer p5

COMPUTER APPLICATIONS

Analysis and design of a fixed-frequency LCL-type series-resonant converter with capacitive output filter p97
CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters p318
Current conveyor based test structures for mixed-signal circuits p213
Delay time sensitivity analysis of multi-generation BiCMOS digital circuits p60
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis p355
Diagnosis of multifaults in analogue circuits using multilayer perceptrons p149
Finding all DC solutions of nonlinear resistive circuits by exploring both polyhedral and rectangular circuits p17
High performance hardware accelerator for design-error simulation p81
IC compatible planar inductors on silicon p29
Improved PIN diode circuit model with automatic parameter extraction technique p329
Knowledge based automatic simulation model generation system p88
Parallel logic simulation with assignable delays on a vector multiprocessor computer p5
Parallel sparse-matrix solution for direct circuit simulation on a transputer array p335
Performance-driven macro-block placer for architectural evaluation of ASIC designs p190
Piecewise linear approximation applied to nonlinear function of a neural network p313
Simulator for path-delay faults on mixed-level circuits p236
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach p104

DATA HANDLING

Collective process circuit that sorts p145

DIELECTRIC MATERIALS AND DEVICES

Calix(8)arene LB superlattices: pyroelectric molecular baskets p108

DIGITAL ARITHMETIC

Finite wordlength effects in two-dimensional multirate periodically time-varying filters p277
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions p201
High-density 16/8/4-bit configurable multiplier p272
New static multi-output carry lookahead CMOS adders p350
Self-generating clock using an augmented distribution network p219

DIGITAL ELECTRONICS

CMOS switched current phase-locked loop p75
Delay time sensitivity analysis of multi-generation BiCMOS digital circuits p60
Differential register bank design for self timed differential bipolar technology p297
Digital sinusoidal oscillator with low and uniform frequency spacing p185
Improved error-table compensation of A/D converters p343
March U: a test for unlinked memory faults p155
On-chip memory module designs for video-signal processing p138
Performance-driven macro-block placer for architectural evaluation of ASIC designs p190
Piecewise linear approximation applied to nonlinear function of a neural network p313
Self-generating clock using an augmented distribution network p219
Systolic arrays for the discrete Hilbert transform p259
Systolic implementation of higher-order CMAC and its application in colour calibration p129
Wired-OR property and improved structure of recovered energy logic (REL) p378

DIGITAL FILTERS

Finite wordlength effects in two-dimensional multirate periodically time-varying filters p277
High performance asynchronous FIR filter design in GaAs p289

ELECTRO-OPTICAL DEVICES

Development of wavelength selective shutters for device application for filters and smart windows p123

ELECTROMAGNETISM

Development of wavelength selective shutters for device application for filters and smart windows p123

ELECTRONIC CIRCUITS

Calix(8)arene LB superlattices: pyroelectric molecular baskets p108
Electrical characteristics of a polyaniline/silicon hybrid field-effect transistor gas sensor p111
Full-swing BiCMOS Schmitt trigger p303
Quality investigation of joint of bipolar transistor chip and lead frame by thermal wave method p78

FILTERS AND FILTERING

Assessment of active microwave inductors p161
Circuit transformation method from OTA-C circuits into CFA-based RC circuits p209
Current conveyor based test structures for mixed-signal circuits p213
Design considerations and implementation of very low frequency continuous-time CMOS monolithic filters p68
Hierarchical techniques for symbolic analysis of electronic circuits p167
Low-pass impedance transformation networks p284
Noise analysis for high-order active filters p11
Noninteracting electronically tunable CCII-based current-mode biquadratic filters p178
Noninverting switched-current sample/hold circuit with compensation of the clock-feedthrough effect p247
Novel CMOS differential voltage current conveyor and its applications p195
Versatile architecture for current-mode biquadratic filters in CMOS technology p229

FORMAL LOGIC

Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions p201

INFORMATION THEORY

Design methodology for the implementation of multidimensional circular convolution p324
Finite wordlength effects in two-dimensional multirate periodically time-varying filters p277
Properties and methods of calculating generalised arithmetic and adding transforms p249

INSTRUMENTATION AND MEASUREMENT

Electrical characteristics of a polyaniline/silicon hybrid field-effect transistor gas sensor p111

INSULATED GATE FIELD EFFECT TRANSISTORS

Electrical characteristics of a polyaniline/silicon hybrid field-effect transistor gas sensor p111

INTEGRATED CIRCUITS

Assessing and comparing fault coverage when testing analogue circuits p1
Delay time sensitivity analysis of multi-generation BiCMOS digital circuits p60
Design and evaluation of a novel enhancement mode FET logic gate configuration in AlGaAs/GaAs/AlGaAs quantum well HEMT technology p243
Diagnosis of multifaults in analogue circuits using multilayer perceptrons p149
Differential register bank design for self timed differential bipolar technology p297
Full-swing BiCMOS Schmitt trigger p303
High performance asynchronous FIR filter design in GaAs p289
IC compatible planar inductors on silicon p29
March U: a test for unlinked memory faults p155
Modelling the BiCMOS switching delay including radiation effects p53
Parallel logic simulation with assignable delays on a vector multiprocessor computer p5
Parallel sparse-matrix solution for direct circuit simulation on a transputer array p335
Performance-driven macro-block placer for architectural evaluation of ASIC designs p190
Self-generating clock using an augmented distribution network p219
Theory and performance of parabolic true logarithmic amplifier p223

LINEAR NETWORK ANALYSIS

Hierarchical techniques for symbolic analysis of electronic circuits p167
Low-pass impedance transformation networks p284

LOGIC AND SWITCHING CIRCUITS

Design and evaluation of a novel enhancement mode FET logic gate configuration in AlGaAs/GaAs/AlGaAs quantum well HEMT technology p243
Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis p355
Differential register bank design for self timed differential bipolar technology p297
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions p201
High-density 16/8/4-bit configurable multiplier p272
High performance asynchronous FIR filter design in GaAs p289
Knowledge based automatic simulation model generation system p88
New static multi-output carry lookahead CMOS adders p350
Parallel logic simulation with assignable delays on a vector multiprocessor computer p5
Simulator for path-delay faults on mixed-level circuits p236
Testability aspects of folded source-coupled logic p361
Wired-OR property and improved structure of recovered energy logic (REL) p378

LOGIC DESIGN

Design of heuristic algorithms based on Shannon expansion for low-power logic circuit synthesis p355
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions p201
High performance asynchronous FIR filter design in GaAs p289
Knowledge based automatic simulation model generation system p88
Parallel logic simulation with assignable delays on a vector multiprocessor computer p5
Performance-driven macro-block placer for architectural evaluation of ASIC designs p190
Simulator for path-delay faults on mixed-level circuits p236
Testability aspects of folded source-coupled logic p361
Wired-OR property and improved structure of recovered energy logic (REL) p378

MATHEMATICAL TECHNIQUES

Design methodology for the implementation of multidimensional circular convolution p324
Finding all DC solutions of nonlinear resistive circuits by exploring both polyhedral and rectangular circuits p17
Generalised hybrid arithmetic canonical expansions for completely specified quaternary functions p201
New results on the resistance of an n-cube p51
Parallel sparse-matrix solution for direct circuit simulation on a transputer array p335
Properties and methods of calculating generalised arithmetic and adding transforms p249

MEASUREMENT OF SPECIFIC VARIABLES

Electrical characteristics of a polyaniline/silicon hybrid field-effect transistor gas sensor p111

MICROWAVE CIRCUITS

IC compatible planar inductors on silicon p29
Space charge induced variation in silicon double drift IMPATT diode parameters p36
Thermal design of gallium arsenide MESFETs for microwave power amplifiers p45

MODULATORS AND DEMODULATORS

CMOS switched current phase-locked loop p75
GaAs MESFET large-signal modelling for multiport Volterra series analysis p40

MULTIPROCESSOR SYSTEMS

Parallel logic simulation with assignable delays on a vector multiprocessor computer p5

NETWORK ANALYSIS

3.3 V mixed-mode IC design using switched-current techniques for speech applications p367
Noninverting switched-current sample/hold circuit with compensation of the clock-feedthrough effect p247

NEURAL NETS

CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters p318
Collective process circuit that sorts p145
Diagnosis of multifaults in analogue circuits using multilayer perceptrons p149
Piecewise linear approximation applied to nonlinear function of a neural network p313
Systolic implementation of higher-order CMAC and its application in colour calibration p129

NONLINEAR NETWORK ANALYSIS

Finding all DC solutions of nonlinear resistive circuits by exploring both polyhedral and rectangular circuits p17
GaAs MESFET large-signal modelling for multiport Volterra series analysis p40
Piecewise linear approximation applied to nonlinear function of a neural network p313

NUMERICAL ANALYSIS

Parallel logic simulation with assignable delays on a vector multiprocessor computer p5
Systolic arrays for the discrete Hilbert transform p259

OPTICAL IMAGE PROCESSING

On-chip memory module designs for video-signal processing p138
Systolic implementation of higher-order CMAC and its application in colour calibration p129

PARALLEL PROCESSING

Design methodology for the implementation of multidimensional circular convolution p324
Systolic arrays for the discrete Hilbert transform p259

PARAMETER ESTIMATION

Improved PIN diode circuit model with automatic parameter extraction technique p329

POWER ELECTRONICS

Analysis and design of a fixed-frequency LCL-type series-resonant converter with capacitive output filter p97
Improved PIN diode circuit model with automatic parameter extraction technique p329

PRODUCTION ENGINEERING

Assessing and comparing fault coverage when testing analogue circuits p1
March U: a test for unlinked memory faults p155
Testability aspects of folded source-coupled logic p361
Thermal design of gallium arsenide MESFETs for microwave power amplifiers p45

PROGRAMMING THEORY

High performance hardware accelerator for design-error simulation p81
Parallel logic simulation with assignable delays on a vector multiprocessor computer p5

SEMICONDUCTOR DEVICE MODELLING

GaAs MESFET large-signal modelling for multiport Volterra series analysis p40
Investigation of step-doped channel heterostructure field-effect transistor p309

SEMICONDUCTOR DEVICES AND MATERIALS

Design and evaluation of a novel enhancement mode FET logic gate configuration in AlGaAs/GaAs/AlGaAs quantum well HEMT technology p243
GaAs MESFET large-signal modelling for multiport Volterra series analysis p40
Improved PIN diode circuit model with automatic parameter extraction technique p329
Investigation of step-doped channel heterostructure field-effect transistor p309
Minimisation of base transit time in AlGaAs/GaAs heterostructure bipolar transistor (HBT) p375
Quality investigation of joint of bipolar transistor chip and lead frame by thermal wave method p78
Schottky barrier diodes from semiconducting polymers p117
Space charge induced variation in silicon double drift IMPATT diode parameters p36

SIGNAL GENERATORS

Digital sinusoidal oscillator with low and uniform frequency spacing p185
Self-generating clock using an augmented distribution network p219
Synthesis of single-resistance-controlled oscillators using CFOAs: simple state-variable approach p104

SIGNAL PROCESSING

Design methodology for the implementation of multidimensional circular convolution p324
Finite wordlength effects in two-dimensional multirate periodically time-varying filters p277
Properties and methods of calculating generalised arithmetic and adding transforms p249
Systolic arrays for the discrete Hilbert transform p259

SPEECH COMMUNICATION AND PROCESSING

3.3 V mixed-mode IC design using switched-current techniques for speech applications p367

SWITCHING THEORY

Parallel logic simulation with assignable delays on a vector multiprocessor computer p5

SYSTEMS THEORY

CMOS analogue neurone circuit with programmable activation functions utilising MOS transistors with optimised process/device parameters p318
Piecewise linear approximation applied to nonlinear function of a neural network p313

TRANSFORMERS

Assessment of active microwave inductors p161
IC compatible planar inductors on silicon p29

WAVEGUIDE COMPONENTS

Assessment of active microwave inductors p161
